2.3 Setup Instructions

This section provides comprehensive instructions for setting up the development environment and running the project locally. Follow these steps carefully to ensure a smooth setup process.

2.3.1 Prerequisites

Before you begin, ensure you have the following software installed on your system:

- **Git** for version control
- **Code Editor** (VS Code, Sublime Text, etc.)
- **Terminal/Command Line** access

2.3.2 System Requirements

2.3.2.1 Minimum Requirements

- **Operating System:** Windows 10, macOS 10.15, or Linux (Ubuntu 18.04+)
- **RAM:** 4GB minimum, 8GB recommended
- **Storage:** 2GB free space
- **Internet Connection:** Required for initial setup and dependencies

2.3.2.2 Recommended Specifications

- **RAM:** 16GB for optimal performance
- **CPU:** Multi-core processor (Intel i5/AMD Ryzen 5 or better)
- **Storage:** SSD for faster build times

2.3.3 Step-by-Step Installation

2.3.3.1 Step 1: Clone the Repository

```
# Clone the repository  
git clone https://github.com/username/gitread_material-ui.git
```

```
# Navigate to project directory  
cd gitread_material-ui
```

2.3.3.2 Step 2: Install Dependencies

2.3.3.3 Step 3: Verify Installation

2.3.3.4 Step 4: Environment Setup

1. Copy environment template:

```
cp .env.example .env
```

2. Configure environment variables (see Configuration section)

3. Initialize database (if applicable):

```
# Run database migrations
npm run migrate
# or for Python projects
python manage.py migrate
```

2.4 Configuration Required

This section outlines all necessary configuration steps to ensure the application runs correctly in your environment. Proper configuration is essential for security, performance, and functionality.

2.4.1 Environment Variables

Environment variables are used to configure the application for different environments (development, staging, production) and to store sensitive information securely.

2.4.1.1 Required Variables Create a `.env` file in the project root directory and configure the following variables:

```
# Application Settings
APP_ENV=development
APP_DEBUG=true
APP_PORT=3000

# Database Configuration
DATABASE_URL=your_database_connection_string

# API Keys and Secrets
API_SECRET_KEY=your_secret_key
ENCRYPTION_KEY=your_encryption_key
```

2.4.2 Build Configuration

2.4.3 Security Configuration

2.4.3.1 Important Security Notes

- **Never commit** `.env` files to version control
- **Use strong passwords** and secure API keys
- **Enable HTTPS** in production environments
- **Regularly update** dependencies for security patches

- **Implement rate limiting** for API endpoints

2.4.3.2 Environment-Specific Settings

Environment	Debug Mode	HTTPS	Database	Caching
Development	Enabled	Optional	Local	Disabled
Staging	Limited	Required	Remote	Enabled
Production	Disabled	Required	Remote	Enabled
